DETAILED ACTION

Information Disclosure Statement

The information disclosure statements filed May 18, 2005 has/have been received and complies with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609. Accordingly, the information disclosure statement(s) is/are being considered by the examiner, and an initial copied is attached herewith.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-27 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear as to whether the claims are intended to be product or method claims. The claims require a fuel cell optimum operating point tracking system and recites methods steps including monitoring, tracking optimum operating point through a maximum power monitoring, allowing the fuel cell maximum power search function to

Art Unit: 1795

operate so as to monitor the power state' giving minimal voltage change at around the current operating voltage value. Specifically Applicant claims :

A fuel cell optimum operating point tracking system used in a power source device powered by a fuel cell, configured so as to improve the responsiveness thereof by monitoring the power state while varying the output voltage of said fuel cell, and by allowing said fuel cell to start operation at an input voltage corresponded to a maximum power point thereof, comprising: a fuel cell maximum power search function; and a fuel cell optimum operating point tracking function capable of tracking an optimum operating point through maximum power monitoring, by allowing said fuel cell maximum power search function to operate so as to monitor the power state to thereby keep the power source operation constant at a stable condition, and additionally giving a minimal voltage change at around the current operating voltage value.

There appears to be a method, but there are no structural components in the product claims. For example, Applicant is claiming "a fuel cell maximum power search function" this is an element of the operating point tracking system, but there appears to be no mechanical parts or means to operate the device.
